

ESCORPORATEDB

Integrated Business Management Solution

CorporateDB is an integrated business management solution that can help you run many aspects of your company. Built using Microsoft SQL server, it is a robust secure environment for controlling all of your important information. CorporateDB will improve your organization's productivity and implement faster, more informed decision making.

Eliminate the cost and headaches of having to manage multiple software programs to run your business by combining everything you need into one easy to use, easy to implement software package.

Project Management

Project management is a complex undertaking, with many stages and processes. It should follow the full business life cycle, from definition and justification of the project, through to delivering demonstrable benefits for the business. CorporateDB makes it easy to track and manage all aspects of a project including human resources, activities, purchasing and costing.

- Estimates and tracks basic cost information for your project
- Manages costs by comparing actual expenditures with what you planned to spend
- Maintains all aspects of the project in a single location(activities, purchases, sales, assets, shipping and supporting documents)

Activities

Time management and employee productivity are crucial assets to your organization. CorporateDB gives you total control of these assets and helps you track down irregularities or weaknesses which are causing unproductive hours.

- Assigns activities to an employee with allotted hours, due dates and priorities
- Activities can be tied to Scientific Research and Experimental Development (SR & ED), and can also be linked to Projects for cost tracking

Timesheets

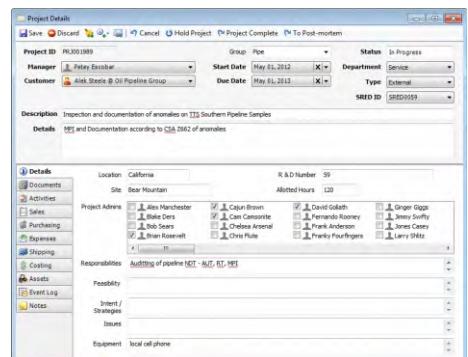

Simplify your employee timesheet management with CorporateDB and track time for payroll, billing and project management. The Timesheet manager in CorporateDB can help reduce costs by making payroll more efficient, by visualizing costs so you can lower them, and by automating billing and invoicing

- Monitors project hours, resources, sick time and overtime
- Automates time entry based on project and activities
- E-mail integration to send timesheet to manager and or payroll
- Customized reporting
- Managers can view all of their employees timesheets

Purchasing

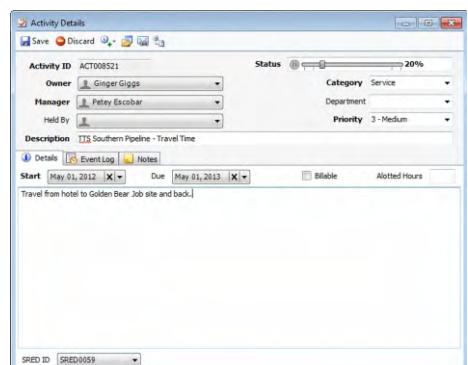

Automate and streamline your purchasing process with CorporateDB. The purchasing manager controls all aspects of the purchasing process from one interface, which gives you the ability to easily analyze critical data and track purchasing trends.

- Make sure the right people are approving purchases
- Track payments and shipping items
- Monitor goods received
- Send e-mail notifications when a PO changes to a new state
- Track PO costs back to a Project and/or SR & ED.

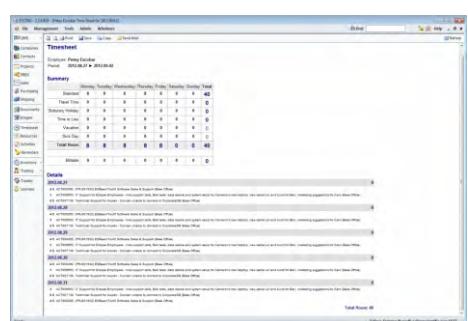

This screenshot shows the 'Project Details' window. It includes fields for Project ID (PRJ001000), Manager (Peter Escobar), Start Date (May 01, 2012), and a description about inspecting anomalies. A tree view on the left lists categories like Details, Documents, Activities, Sales, Purchasing, Expenses, Shipping, Costing, Assets, Event Log, and Notes. A large pane on the right displays a grid of tasks or resources with columns for Location, R&D Number, and Allocated Hours.

Project Detail

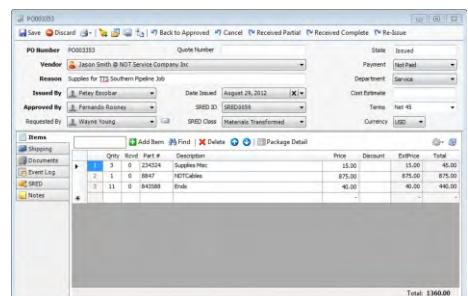

This screenshot shows the 'Activity Details' window. It includes fields for Activity ID (ACT0008521), Owner (Ginger Giggs), Status (20%), and a description about travel between Golden Bear and a job site. A tree view on the left lists Details, Documents, Activities, Sales, Purchasing, Expenses, Shipping, Costing, Assets, Event Log, and Notes. A large pane on the right displays a grid of activity details with columns for Start, Due, and Duration.

Activity Detail

This screenshot shows the 'Timesheet' window. It features a summary grid at the top showing hours worked by project and activity. Below is a detailed log of individual time entries with columns for Date, Activity, Description, and Hours. A sidebar on the left provides navigation links for Timesheets, Activities, Sales, Purchasing, Expenses, Shipping, Costing, Assets, and Events.

Timesheet Detail

This screenshot shows the 'Purchase Order' window. It displays a grid of purchase order items with columns for Qty, Unit, Part #, Description, Price, Discount, and Total. The header includes fields for PO Number (PO000335), Vendor (Jacob Smith B NOT Service Company Inc.), and various status and approval dropdowns. A sidebar on the left lists Details, Documents, Event Log, Assets, and Notes.

Purchasing Detail

Sales

Equip your sales force with CorporateDB to provide them one workspace that has all the tools needed to close the deal faster.

- Store all relative documents within a sales order
 - Stay notified via e-mail when payment has been received or the sale has moved to a new state in its life cycle
 - Quickly issue quotes and order confirmations to your customer
 - Delegate tasks to co-workers
 - Tracks purchases and shipping related to the sale
 - Assign a sales order to a project for costing.

Document Management

Communication and collaboration among people is a cornerstone of team-based productivity. CorporateDB includes a powerful DMS (document management system) designed to capture, manage, and share digital documents. Improve the bottom line with increased efficiency and collaboration, and reduce risk by meeting higher standards of compliance and business continuity. The DMS integrates a full complement of electronic document management software capabilities within the Microsoft Windows environment.

- Standard notification and approval features in the DMS drive your company's teamwork by keeping members informed about document changes
 - Check-in/check-out procedures allow users to collaborate on documents and make individual changes with confidence that everybody's changes will not be overwritten

Scheduling and Resource Management

The built-in resource scheduler lets you manage your equipment and people effectively. The scheduler automates the time-consuming process of project and resources scheduling. Organizations are able to reduce real estate costs, improve productivity, and maximize efficiency. An industry standard Gantt chart allows you to quickly and easily visualize people and equipment schedules as well as their upcoming availability. Reminders are automatically generated and placed on the dashboard.

ISO Tools

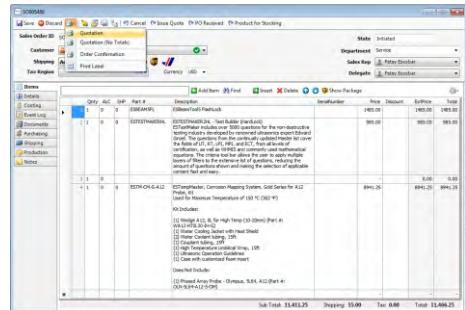

CorporateDB contains a powerful set of tools to help you manage every aspect of an ISO-compliant organization. Critical categories are presented with quick access functionality. Manage and track non-conformances from start, through corrective action to completion. CorporateDB secures the control of all your documents and records.

People Management

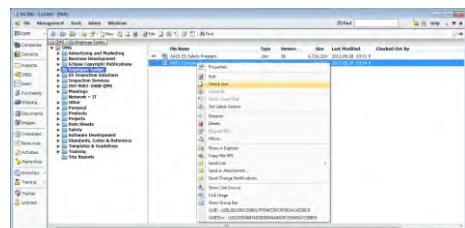

Keep track of your staff and have detailed, up-to-date contact information to stay current with each contact in your database, all in a single location. CorporateDB includes a contact and customer management solution that coordinates all your company's departments, so they can easily share information with each other.

Architecture

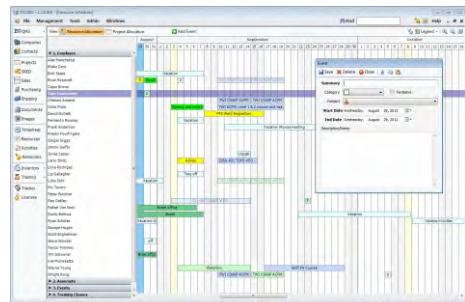

CorporateDB is built on a client/server-based architecture for centrally storing, managing and controlling access to data. Information is stored in a Microsoft SQL Server database. The server can be accessed within a corporate network or through the internet if desired. CorporateDB leverages SQL Server's security infrastructure and includes support for user-based login or using Windows Authentication. Based on the roles that a specific user belongs to, the client controls access to the functionality that is available to them.
